**DEPARTMENT OF DEFENSE IMPLEMENTATION GUIDANCE  
for  
STORM WATER PHASE II REGULATIONS**

---

**I. INTRODUCTION**

**A. Purpose**

The purpose of this guidance is to assist Department of Defense (DoD) personnel in the implementation of Storm Water Phase II regulations. This guidance outlines and clarifies the applicability and requirements of the regulations for implementation by DoD.

**B. Background**

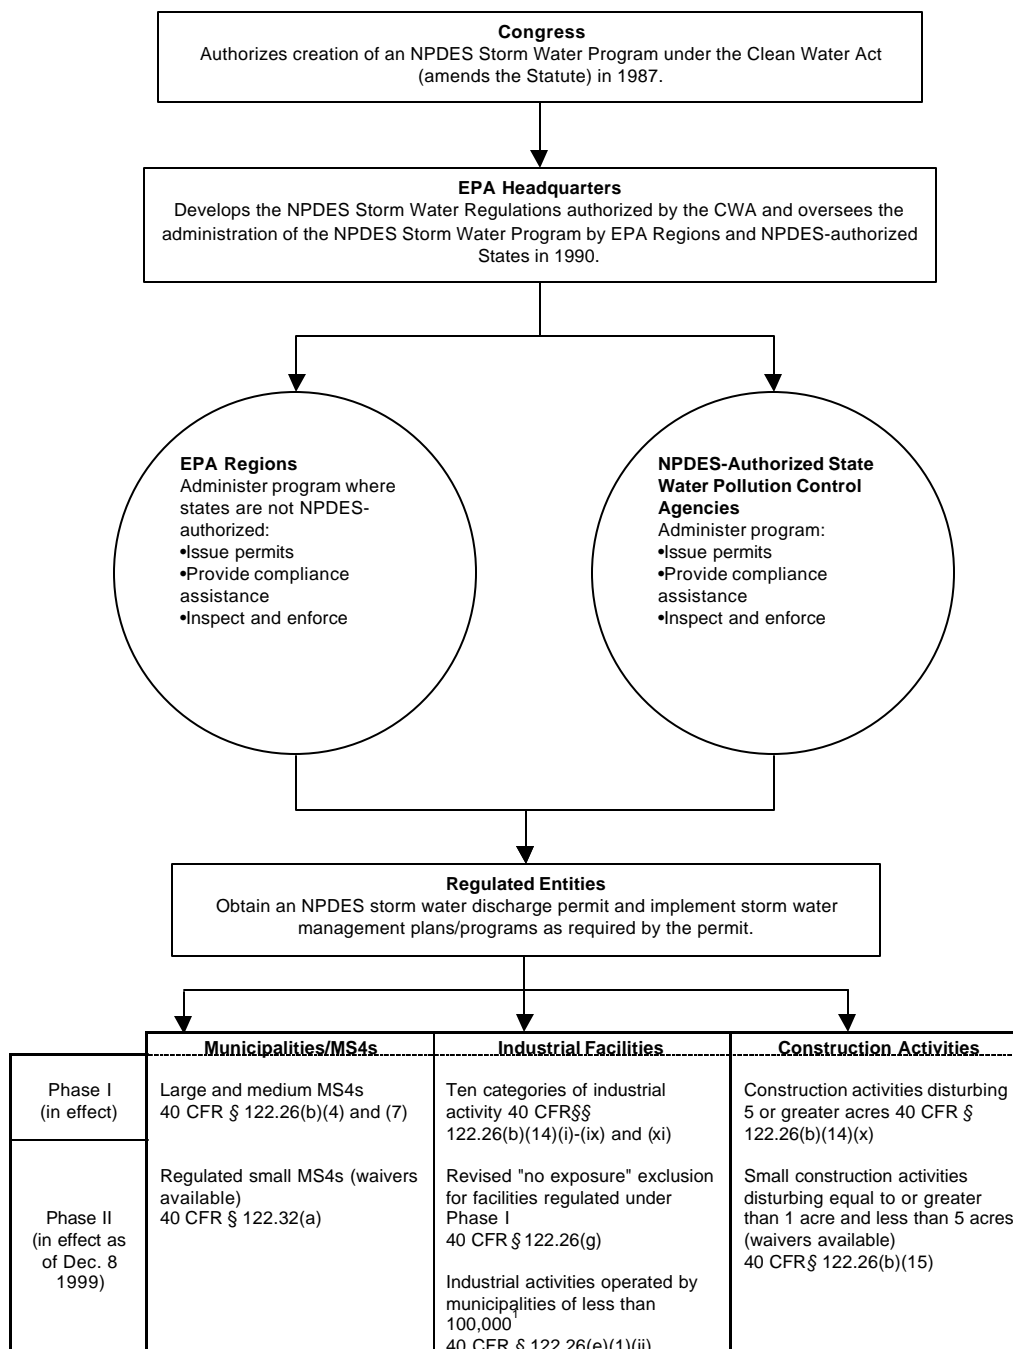

In 1987, Congress amended the Clean Water Act (CWA) to require implementation, in two phases, of a national program for addressing storm water discharges. The first phase, referred to as the Storm Water Phase I rule, was promulgated by the U.S. Environmental Protection Agency (EPA) on November 16, 1990 (55 FR 47990), and requires National Pollutant Discharge Elimination System (NPDES) permits for storm water discharge from: 1) “medium” and “large” municipal separate storm sewer systems (MS4s) serving populations of 100,000 or greater, and 2) eleven industrial activities, including construction activity disturbing 5 acres of land or greater.

On December 8, 1999, EPA issued the second phase of the regulations, Storm Water Phase II (64 FR 68722), which extend the requirements for NPDES permits to storm water discharge from: 1) “small” MS4s serving populations of less than a 100,000 in an “urbanized” area, and 2) construction activities disturbing between 1 and 5 acres of land. These small MS4s and construction activities are automatically designated as being regulated by this rule. In addition, the Phase II rule expands the “no exposure” exclusion to all industrial activities covered under Phase I except for construction activity and sets a new deadline for permit coverage for municipally-owned industrial activity that had been temporarily exempted from storm water permit coverage. An overview of the Phase I and II storm water programs is provided in Figure 1 on page 2.

**C. Deadline for Compliance**

Small MS4s and construction activities designated by the rule are required to seek permit coverage by March 10, 2003, unless their NPDES permitting authorities decide to phase in permit coverage and establish alternative deadlines. Small MS4s and construction activities designated by the NPDES permitting authority are required to seek permit coverage within 180 days of notice by the regulator. By May 8, 2007, NPDES permitting authorities may also phase in coverage for small MS4s with populations of less than 10,000. Refer to the Storm Water Phase II Compliance Timeline in Table 1 for additional deadline information.

**Figure 1: NPDES Storm Water Program Regulatory Overview**

1. All such activities (except airports, uncontrolled sanitary landfills, and power plants) were previously exempted from the original Phase I application deadline.

**Table 1: Storm Water Phase II Compliance Timeline**

ACTIVITY	DEADLINE
Conditional “no exposure” exclusion option available in States where EPA is the NPDES permitting authority	February 7, 2000
Submission of “no exposure” certification	Every 5 years
EPA issues a menu of Best Management Practices (BMPs) for small MS4 programs	October 2000
EPA issues a model general permit for small MS4s	October 2000
EPA issues guidance on measurable goals for small MS4 programs	October 2001
NPDES permitting authority determines designation of small MS4s located outside of an urbanized area that serve a jurisdiction with a population of 10,000 and population density of 1,000/sq. mile	By Dec. 9, 2002; or by Dec. 8, 2004, if applying designation criteria on a watershed basis under a comprehensive watershed plan
NPDES permitting authority determines waivers for regulated small MS4s in urbanized areas	By December 9, 2002
NPDES permitting authority issues general permits for regulated small MS4s and small construction activity	By December 9, 2002
Operators of regulated small MS4s and small construction activities designated by the rule must obtain permit coverage	By March 10, 2003
Operators of regulated small MS4s and small construction activities designated by NPDES permitting authority must obtain permit coverage	Within 180 days of notice
Temporarily exempted municipal operators of industrial activities must obtain permit coverage [Intermodal surface Transportation Enforcement Act (ISTEA) moratorium]	By March 10, 2003
The NPDES permitting authority may phase in coverage for small MS4s serving jurisdictions with population of less than 10,000 on a schedule consistent with a State watershed permitting approach	Completion of phase-in by March 8, 2007
The regulated small MS4s must fully implement their storm water management programs	By the end of the first permit term – typically a 5-year period
Re-evaluation of the Phase II small MS4 regulations by EPA	By December 2012
NPDES permitting authority determination on a petition for designation of a non-regulated storm water discharger	Within 180 days of receipt

## II. APPLICABILITY DETERMINATION & COMPLIANCE PROCESS

You must first determine if the Phase II requirements apply to your MS4, small construction activities, and/or industrial activities to know if you must comply with the new requirements. To do this, follow the step-by-step procedures given below. Section II-A addresses MS4s, section II-B addresses small construction activities, and section II-C covers industrial activities. Further details on the compliance requirements for each category of regulated entity are given in Appendices A–C. Appendix D provides abbreviations and definitions for terms used in this guidance.

### A. Municipal Separate Storm Sewer Systems (MS4s)

**Step 1:** Determine if you are an operator of an MS4 (see Appendix A, Figure A-1).

***MS4** – A publically-owned conveyance or system of conveyances that discharges to waters of the U.S. and is designed or used for collecting or conveying storm water, is not a combined sewer, and is not part of a publicly-owned treatment works (POTW). For an expanded definition see Appendix D, pages 33-34.*

**Step 2:** As an operator of an MS4, determine if you are an operator of a small MS4.

***Small MS4** – Any MS4 that is not regulated under Phase I of the NPDES storm water program and Federally-owned MS4s.*

**Step 3:** As an operator of a small MS4, are you regulated by the Storm Water Phase II rule? To find out, refer to Appendix A (Figures A-1 and A-2, and section A-1) and determine if you are classified under "a" or "b" below:

#### a. Automatically designated by the rule

- First, determine if your system is located partially or fully within an urbanized area (UA) by using the flow diagram in Appendix A (Figure A-2) and referring to information on UAs given in the Final Rule and provided in Appendices E-H. If it is not, then go to "b" below.
- Second, determine if you qualify for any of the waivers described in Appendix A (section A-2) from your permitting authority. If you do qualify, stop here; if not, go to Step 4.

#### b. Potentially designated by the NPDES permitting authority

- Determine if your system is located outside of a UA and if either of the following conditions apply:
  1. Serves a jurisdiction with a population of at least 10,000 and a population density of at least 1,000 people/sq. mile and meets one or several of the following criteria:
    - Discharge to sensitive waters,
    - High population density,
    - High growth or growth potential,
    - Contiguity to a UA,
    - Significant contributor of pollutants to waters of the U.S., or

- Ineffective protection of water quality concerns by other programs.

OR

2. Contributes substantially to the pollutant loadings of a *physically interconnected* MS4 that is permitted by the NPDES storm water program. This means the other MS4 could be a large, medium, or a regulated small MS4.
- Because designations are made at the discretion of the permitting authority, a final determination is made by the permitting authority and not the small MS4 operator. If designated, continue with Step 4.

**Physically interconnected** – means that one MS4 is connected to a second MS4 in such a way that it allows for direct discharges into the second system.

**Step 4:** First review the Storm Water Phase II program requirements and the three permitting options in Appendix A (sections A-3 and A-4). Note that the permit options available to you are determined by your NPDES permitting authority. However, reviewing these options will assist you in the planning, preparation, and development of your storm water permit and management program.

Next, determine whether to submit a Notice of Intent (NOI) or permit application on your own or as a co-permittee and follow the steps below:

**Applying on your own:**

- Conduct a preliminary assessment of the storm water management characteristics and needs of the area served by the regulated small MS4.
- Determine appropriate Best Management Practices (BMPs) and measurable goals. *(As a guide, use the menu of BMPs that is provided by EPA or the permitting authority. The EPA website at [www.epa.gov/owm/sw](http://www.epa.gov/owm/sw) will also have references and links to helpful guidance on every facet of a storm water management program for MS4s.)*
- Determine who will be assigned responsibilities to implement the program.

**Applying as a co-permittee:**

- Determine if there are other regulated Phase I MS4s (refer to list on the EPA website <http://www.epa.gov/owm/sw>) or Phase II MS4s (refer to Appendix F and maps of your UA) surrounding your property. You will need this information to make the decision to:
  - Be a co-permittee under a general or new individual permit with another regulated small MS4,
  - Be a co-permittee under a modified individual permit with another regulated medium or large MS4, or
  - Rely on another regulated MS4 for partial or full implementation of the minimum measures on your behalf. Determine if programs similar to one or more of the minimum measures are already being performed by another entity (see Appendix A, section A-5). Meet with other entities to discuss the arrangement and any legal agreements.

- Meet with local Phase I and Phase II MS4 operators to discuss co-permittee status, options, or sharing of resources.

**Step 5:** Determine which permit option to choose from among those made available by your NPDES permitting authority. Consider the following facts in your decision:

**Under a General Permit:**

When your permitting authority issues the general permit (which is expected to be no later than December 9, 2002) read it carefully. You may not be required to implement every minimum measure because the permitting authority might recognize or reference other similar programs. For this reason, before the permit is issued, follow Step 4 but perform only a *preliminary* storm water management program until the final permit requirements are known. Prior to submitting your NOI, you will need to make final decisions on the following issues and complete the development of your storm water management plan:

- Do you want to be a co-permittee with another regulated small MS4?
- Do you want to rely on another entity for some or all of the permit requirements?
- Which BMPs and measurable goals will you use for each minimum measure you will be implementing?

**Under an Individual Permit (new or modified):**

If you have chosen one of the individual permit options (i.e., NOI or application submission under Phase II, Phase I, or a modified existing Phase I), you will need to continue efforts in Step 4, as applicable, and complete development of your NOI or permit application in accordance with the Phase II regulations.

**Step 6:** Submit your NOI under a general permit or your individual permit application to the NPDES permitting authority by March 10, 2003, unless your NPDES permitting authority decides to phase in permit coverage and establishes alternative deadlines. If you have chosen the option to be a co-permittee with another small MS4 under the Phase II General or Individual permit you may jointly submit your NOI or individual permit application.

**Step 7:** Implement your storm water management program in accordance with your permit, which may contain the following information (detailed in Appendix A, section A-6):

- Menu of BMPs submitted with your NOI,
- Applicable standards,
- Frequency of reports,
- Required report content,
- Monitoring requirements,
- A change in the selected BMPs (*This item, as required in the Phase II regulations at 40 CFR § 122.34(g) in the Code of Federal Regulations (CFR), is not applicable if you sought coverage under an individual permit under the Phase I regulations or under a modification of an existing Phase I MS4 permit.*),
- Recordkeeping requirements,
- Implementation schedule, and
- Penalties for noncompliance.

The Phase II rule allows you up to 5 years to fully implement your program. However, the exact timeframe is at the discretion of your NPDES permitting authority.

**Note:** Be aware that you may need to take over implementation of a minimum control measure if you are relying on another entity for its implementation and the other entity fails to perform it effectively. This is why EPA encourages a legally binding agreement when choosing to rely on another entity. Also, the permitting authority may choose to change your mix of BMPs and measurable goals as submitted in your permit application if it determines that your program is not effectively controlling pollutant discharges.

For further details on MS4 compliance requirements, refer to Appendix A.

## **B. Small Construction Activities**

**Step 1:** Determine if your construction site will discharge storm water runoff into an MS4 or to waters of the United States (see Appendix B, Figure B-1). If so, proceed to Step 2. If not, stop here.

**Step 2:** Determine if your construction site's storm water discharge will meet the definition of a "storm water discharge associated with small construction activity" (see Appendix B, section B-1). If so, proceed to Step 3. If not, stop here.

*Under Phase II, storm water discharges from construction site activities that result in disturbance of greater than or equal to 1 acre and less than 5 acres of land are designated as "storm water discharges associated with small construction activity" (40 CFR § 122.26(b)(15)).*

**Step 3:** If your site meets the definition of small construction activity, determine if it qualifies for a waiver from the permit requirements (see Appendix B, Figure B-1 and sections B-2 & B-3). If so, stop here. If not, proceed to Step 4.

**Step 4:** Review the applicable storm water discharge permit for small construction activity. If it has not yet been issued, then review the construction general permit (CGP) to get a sense of the upcoming permit requirements and the permitting options available. The small construction permit should be issued by the NPDES permitting authority by December 9, 2002 (see Appendix B, sections B-4 & B-5).

**Step 5:** Determine which parties are considered operators and, therefore, are responsible for complying with the requirements described in the storm water permit for small construction activity.

*An **operator** is the person or persons that have either operational control of construction project plans and specifications, or day-to-day operational control of activities necessary to ensure compliance with storm water permit conditions.*

**Step 6:** Develop a storm water pollution prevention plan (SWPPP) (see Appendix B, section B-5b).

- SWPPPs must be developed prior to submitting the Notice of Intent (NOI).
- You do not need to submit the SWPPP to your NPDES permitting authority; however, it should be accessible to the public.

- Step 7:** Complete and submit an NOI (see Appendix B, section B-5c).
- For existing construction activities, your NPDES permitting authority may or may not require an NOI. If an NOI is required, the Phase II rule requires that you submit it no later than March 10, 2003, or 90 days after the NPDES permitting authority issues general permits, whichever comes first.
  - For new construction activities, submit a completed NOI to your NPDES permitting authority 2 days prior to beginning work at the construction site.
- Step 8:** Implement the SWPPP. This includes the generation of inspection reports that are to be kept on-site.
- Step 9:** Complete and submit a Notice of Termination (NOT) to your NPDES permitting authority within 30 days after one or more of the appropriate conditions have been met (Appendix B, section B-5d).

*For further details on small construction activity compliance requirements, refer to Appendix B.*

### **C. Industrial Activities**

- Step 1:** Determine if the “no exposure” exclusion applies to your industrial activities (See Appendix C, section C-1).

*“No exposure” refers to all industrial materials and activities protected by a storm-resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. For more information on this specific provision, refer to page 6-2 through 6-4 of EPA’s Storm Water Phase II Compliance Assistance Guide at <http://www.epa.gov/owm/sw/phase2>.*

- Step 2:** If you qualify for the “no exposure” exclusion, you do not need to apply for a discharge permit. However, you must submit a certification to the permitting authority (See Appendix C, section C-2).
- Step 3:** If you do not qualify for the “no exposure” exclusion, you must apply for a discharge permit.

*For further details on industrial activity compliance requirements, refer to Appendix C.*

### III. MOST FREQUENTLY ASKED QUESTIONS

1. **Question:** Will all DoD installations be regulated by the Storm Water Phase II rule?

**Answer:** Yes, but only if they have a storm water system that :

- A. Meets the definition of a small MS4,
- B. Is located fully or partially in a Bureau of the Census delineated urbanized area (UA), and
- C. Has not been granted a waiver by the regulatory authority.

2. **Question:** How do we determine if our installation, located in a non-urban area, will be regulated or designated by EPA as an MS4?

**Answer:** Installations located outside of a UA could be designated as a regulated small MS4 if the installation meets the definition of a small MS4 and:

- A. Serves a jurisdiction with a population of at least 10,000 and a population density of at least 1,000 people/sq. mile and meets a combination of criteria that indicates they are contributing to the degradation of waters of the U.S.

OR

- B. Contributes substantially to the pollutant loadings of a "physically interconnected" MS4 that is permitted by the NPDES storm water program. This means the MS4 that the installation MS4 is discharging to could be a large, medium, or regulated small MS4.

Because of EPA's current move toward managing water quality by a watershed approach, EPA will probably base its designation decision on local or watershed conditions and total maximum daily load (TMDL) assessments. This information will indicate whether the discharges flow into waterbodies where there are actual or potential violations of water quality standards, including impairment and degradation of designated uses or exceedance of water quality criteria. EPA recommends that criteria for designations include: discharge to sensitive waters, high growth or growth potential, high population density, contiguity to an urbanized area, significant contribution of pollutants to water, and ineffective control of water quality concerns by other programs. EPA also encourages the application of these criteria in a watershed context. Keep in mind that the NPDES authority also reserves the right to designate for regulation ANY small MS4 (not listed by A or B above) that is contributing pollutants to waters of the U.S.

3. **Questions:** What is the definition of "population" with respect to DoD facilities?

**Answer:** Population is defined as the total number of individuals that maintain residential quarters within the installation's boundary for more than 6 months. Understanding this definition is very important when determining if your activity qualifies for a waiver from the Storm Water Phase II requirements.

4. **Question:** Should a DoD facility seek exemption under the "no exposure" exclusion of the Phase II rule?

**Answer:** Yes, a DoD facility should seek the "no exposure" exclusion; but be aware that in so doing, the facility must obtain "no exposure" certification every 5 years and allow unscheduled inspections by the permitting authority. The inspection reports are made

available to the public, which could lead to public relations problems if procurement of the “no exposure” exclusion is not properly handled.

5. **Question:** If an individual Federal building, such as a Reserve Center, is used only on weekends but at that time has a population of over 1,000, is it regulated under the Storm Water Phase II regulation? Such a building might have a parking lot with run-off or a storm sewer, but not a true system of conveyances.

**Answer:** No. EPA has clarified that the definition of a small MS4 does not include individual buildings, and most likely will not include a Federal complex of two or three buildings. As stated in the rule, “The minimum measures for small MS4s were written to apply to storm sewer “systems” providing storm water drainage service to human populations and not to individual buildings” (64 FR 68749).

6. **Question:** Is a combined sewer system considered an MS4?

**Answer:** No.

7. **Question:** Can a facility be regulated under the Storm Water Phase II rule if it has non-point storm water runoff?

**Answer:** No. In order for such storm water to be covered by the rule, it must be discharged to the waters of the United States through a discernible, confined, discrete conveyance. “Sheet flow” runoff would not result in a point source unless and until it is channeled. However, States can regulate non-point source runoff under other State regulations or erosion plans, or as runoff associated with a TMDL for specific waterbodies.

8. **Question:** Who determines whether a small MS4 is contributing “substantially” to storm water pollutant loadings?

**Answer:** The permitting authority decides whether an MS4 is contributing discharges in a manner that requires regulation.

9. **Question:** What is the definition of “public” with respect to DoD facilities and public education responsibilities?

**Answer:** EPA agrees with DoD that the term “public” should be interpreted as referring to those individuals living and/or working within the fence line of the facility. Regulated entities are required to implement six minimum control measures, one of which involves “public education and outreach.” Public education and outreach could involve distributing educational materials to inform base residents of the negative impacts polluted storm water runoff discharges can have on water quality.

10. **Question:** Does the Phase II rule require any additional monitoring by small MS4s?

**Answer:** EPA recommends that NPDES permits should not require any additional monitoring beyond that already performed by small MS4s. EPA also does not anticipate “end-of-pipe” monitoring requirements for regulated small MS4s.

11. **Question:** Under what type of permit should a facility seek coverage?

**Answer:** Facilities should always seek coverage first under a general permit before considering the individual or co-permittee permit options.

12. **Question:** When should an installation seek coverage for a Storm Water Phase II small construction permit?

**Answer:** If the installation is considered:

- A.** A regulated small MS4 under the Storm Water Phase II rule, then its construction activity must be controlled through an installation program to reduce pollutants in the storm water runoff. This will be one of the six minimum control measures under its small MS4 permit. Under this control measure, the installation must develop specific minimum indicators to ensure a reduction in storm water runoff from construction sites is accomplished.
- B.** Not to be a regulated small MS4, then each operator of a construction activity on the installation that disturbs 1 acre or more will be required to acquire a construction permit from the permitting authority.

In the case of **B** above, it is recommended that the installation attempt to negotiate with its regulatory authority to allow the installation to apply for one construction permit that covers all construction activity projected over a year's time, to include construction activities for military training exercises if necessary. In order for this type of permit to be granted by the regulators, installation management personnel would have to ensure that a construction site storm water runoff control program was in place and was at least meeting the minimum requirements similar to those required for a regulated small MS4 construction program. Since DoD installations usually have this information ahead of time, each construction project could be forecasted and planned to meet all necessary requirements. If this annual construction permit process was approved the installation could submit one Notice of Intent (NOI) and one Notice of Termination (NOT) covering all the construction activities. The installation would then be designated as the responsible party for all construction. In addition, the facility should offer to provide regulators the individual supplemental start date notices as they become available. This would greatly reduce paperwork and the burden of multiple permits for the installation.

13. **Question:** If an installation already has a Phase I NPDES permit for an industrial discharge, and there are other outfalls (not monitored) connected to both their permitted system and a regulated MS4 (outside the installation), is the installation required to have another NPDES permit for the MS4 under the Storm Water Phase II rule?

**Answer:** The installation should attempt to negotiate with its regulatory authority to have all its outfalls regulated under its Phase I permit. Since there are no monitoring requirements for small MS4s, the permit should not require monitoring of the MS4 outfalls. However, the installation will probably have to describe to the regulator how its existing Phase I program will address discharges and management of the outfalls not previously permitted.

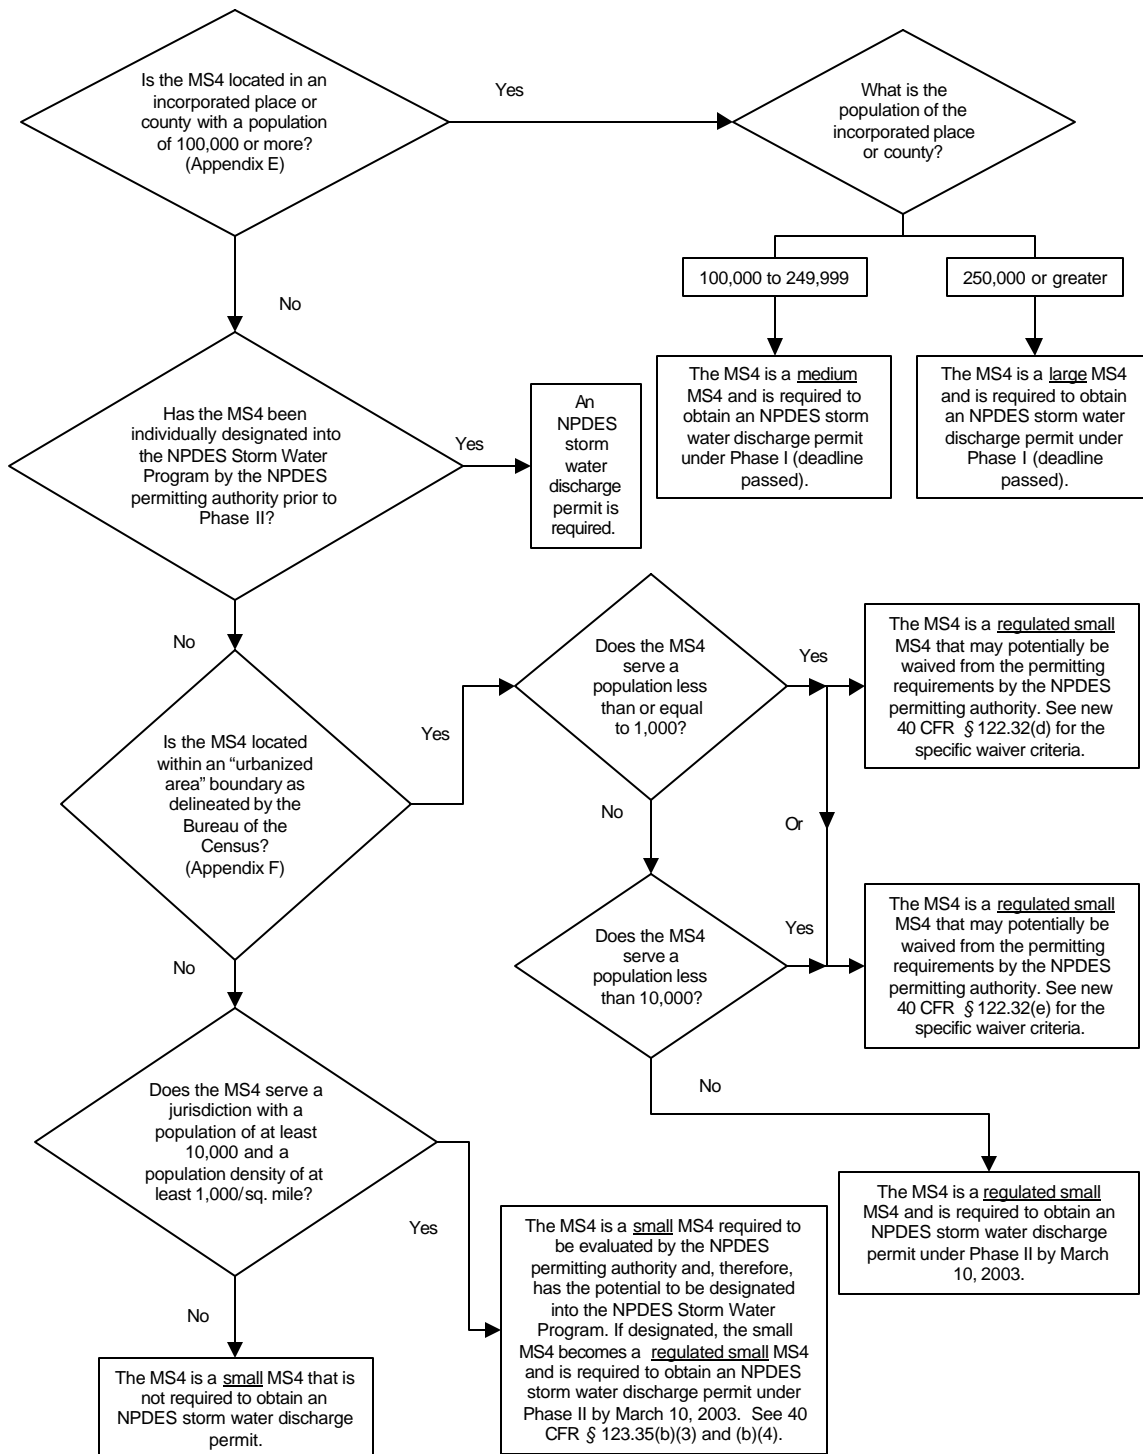

14. **Question:** If the installation's storm water system is discharging into another small, medium, or large MS4, such as that of a neighboring municipality, should the installation contact the operator of that MS4 or municipality and begin negotiating to be a co-permittee under either their Phase I or Phase II Storm Water Permit?

**Answer:** **FIRST** make sure your installation's storm water system meets the criteria for being regulated under the Phase II rule (see related FAQs). **Before** pursuing a co-permittee situation, **discuss all possible options for obtaining a Phase II permit with your installation's legal representative.** A co-permittee situation is legally binding, may unnecessarily increase DoD liability, and will most likely require a contractual agreement and fee payment to a municipality or other operator of a small MS4. Your legal office may agree that the best options for an installation, upon meeting the criteria of a designated small MS4 under the regulation, are to obtain a general permit or to be included in a pre-existing Phase I installation permit.

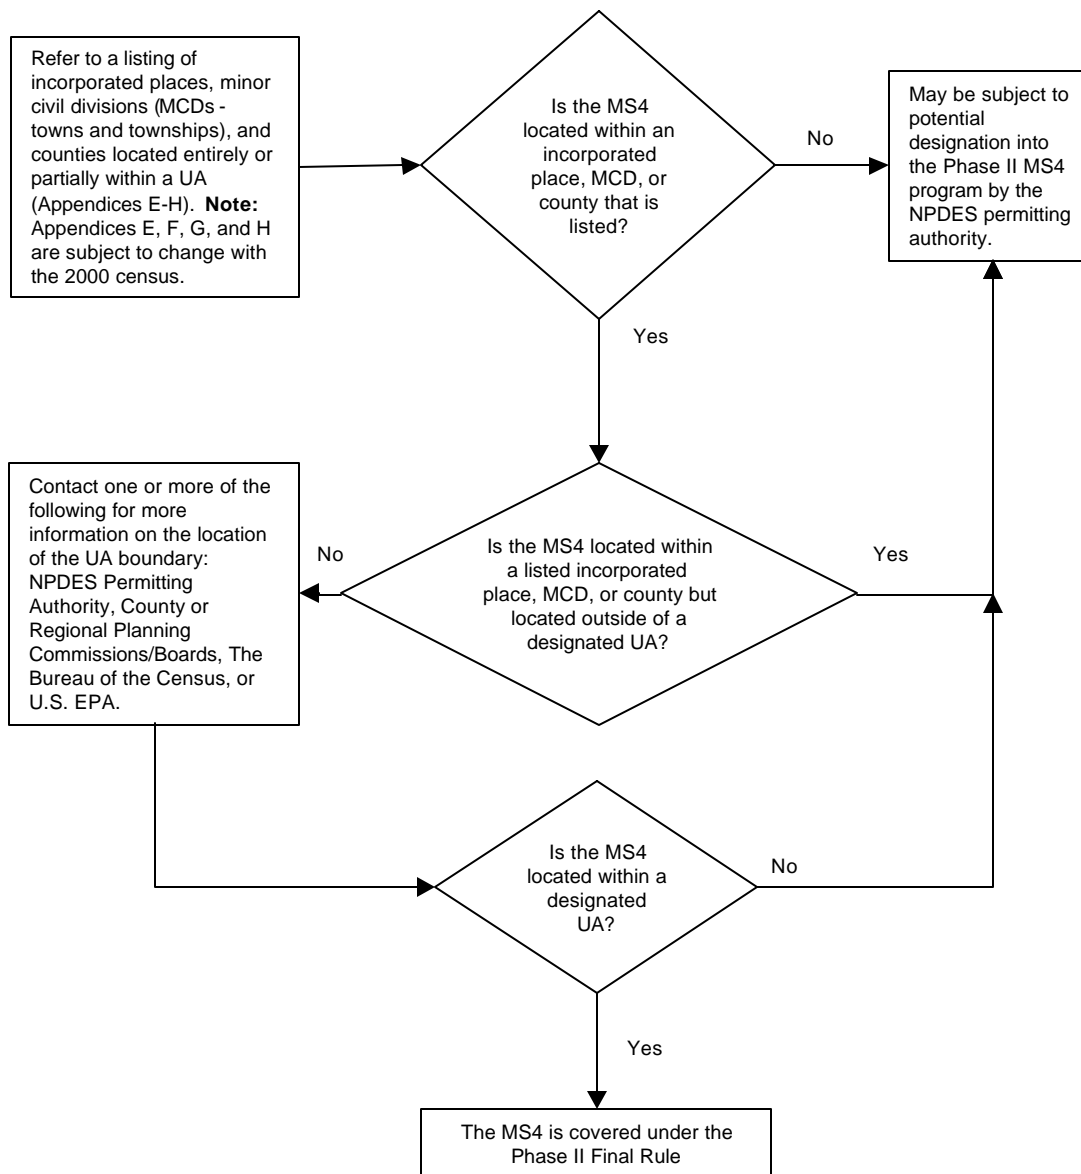

# APPENDICES

## Appendix A: Compliance Requirements for MS4s

Figure A-1: MS4 Storm Water Program Permitting Decision Tree

**Figure A-2: Definition and Description of Urbanized Area**

Urbanized Area (UA) - A Bureau of the Census determination of a central place (or places) and the adjacent densely settled surrounding territory that together have a minimum residential population of 50,000 people and a minimum average density of 1,000 people/square mile. This is a simplified definition.

## A-1. Applicability

The Storm Water Phase II rule covers small MS4s either through automatic nationwide designation or on a case-by-case designation made by the NPDES permitting authority.

### a. Who is automatically designated for coverage?

Operators of small MS4s located in “urbanized areas” (UAs) as delineated by the Bureau of the Census.

**An urbanized area (UA)** - is a land area comprising one or more places – central places – and the adjacent densely settled surrounding area – urban fringe – that together have a residential population of at least 50,000 and an overall population density of at least 1,000 persons per square mile (Figure A-2). For a listing of UAs based on 1990 Census data, see Appendix F.

**Note:**

- Only the portion of the small MS4 that is located within UA boundaries is regulated under Phase II. For example, if a county operates a small MS4 that serves the whole county but only half of the MS4 falls within the UA boundary, then the county must obtain permit coverage only for the half of the MS4 in the UA.
- Many MS4s in areas below 100,000 in population have been individually brought into the Phase I program by NPDES permitting authorities. Such already regulated MS4s are considered Phase I MS4s and are not required to develop a Phase II program.
- Once a small MS4 is designated into the Phase II storm water program based on the UA boundaries, it cannot be waived from the program if determined to be outside UA boundaries in a subsequent UA calculation unless or until it meets the criteria for a waiver. In addition, before the time of permit issuance (by December 9, 2002), a new UA calculation based on the 2000 Census should be published. The regulated small MS4 universe then will be based on these new calculations.

### b. Who can be designated for coverage by the permitting authority?

Operators of small MS4s located outside of a UA may be designated as regulated storm water dischargers on a case-by-case basis if the permitting authority determines that the discharger is **causing or has the potential to cause an adverse impact** on water quality.

NPDES permitting authorities are required to designate any small MS4 located outside of a UA that contributes substantially to the pollutant loadings of a *physically interconnected* MS4 that is permitted by the NPDES storm water program. Because designations are at the discretion of the permitting authority, a final determination is made by the permitting authority and not the small MS4 operator.

**Physically interconnected** – means that one MS4 is connected to a second MS4 in such a way that it allows for direct discharges into the second system.

## A-2. Waivers

Operators of small MS4s can be waived from meeting the requirements of the Storm Water Phase II rule if either Option 1 or 2 below applies **and** if their storm water discharges do not cause, or have the potential to cause, water quality impairment:

- Option 1

- The jurisdiction served by the system is less than 1,000 people,
- The system is not contributing substantially to the pollutant loadings of a physically interconnected regulated MS4, and
- If the MS4 discharges any pollutant that has been identified as a cause of impairment to the waterbody to which it discharges, then the operator must certify that storm water controls are not needed based on wasteload allocations that are part of an EPA approved or established “total maximum daily load” (TMDL) that addresses the pollutant(s) of concern. The CWA Section 303(d) list should be used to determine which pollutants have been determined to be a cause of impairment. Each State and EPA list these pollutants on their environmental or CWA websites.

**Note:** The third criterion of this waiver option need only be met if the small MS4 is discharging into an impaired waterbody and the discharge contains a pollutant or pollutants that are the cause of the impairment (refer to CWA Section 303(d) list).

- Option 2

- The jurisdiction served by the system is less than 10,000 people,
- An evaluation of all waters of the U.S. that receive a discharge from the system shows that storm water controls are not needed based on wasteload allocations that are part of EPA-approved or established TMDLs that address the pollutants of concern or an equivalent analysis, and
- Future discharges from the small MS4 do not have the potential to result in exceedances of water quality standards.

- Deadline for Waivers

The NPDES permitting authorities are required to make their waiver determinations by December 9, 2002, to coincide with the expected issuance of their small MS4 general permit. If the permit authority chooses to phase in permit coverage based on a State comprehensive watershed plan/approach, then regulated small MS4s may be waived on the same schedule as the State. The phase-in coverage and waivers are to be completed no later than March 8, 2007.

### **A-3. Requirements**

The Storm Water Phase II rule requires operators of small MS4s to apply for a permit authorizing them to implement storm water discharge management controls known as “Best Management Practices” (BMPs).

A regulated small MS4 operator is required to submit a permit application and obtain coverage under a NPDES storm water permit. Under the permit, the operator will be required to develop and implement a storm water management program that will:

- Reduce the discharge of pollutants to the “maximum extent practicable” (MEP),
- Protect water quality, and
- Satisfy the appropriate water quality requirements of the Clean Water Act.

The program includes six minimum control measures, evaluation/assessment and reporting efforts, and recordkeeping tasks, as described below in sections A-5 & A-6.

#### **A-4. Permitting Options**

The Phase II rule offers many flexible permit options for the regulated small MS4 operator and the permitting authority. Unlike the Phase I program that primarily utilizes individual permits for medium and large MS4s, the Phase II approach allows operators of regulated small MS4s, as well as permitting authorities, to choose from many permitting options. **However**, the NPDES permitting authority reserves the right to determine which options are available to the regulated small MS4s in their jurisdiction. These options are as follows:

##### **a. General Permits**

- General permits are strongly encouraged by EPA and DoD. The Phase II program has been designed specifically to accommodate a general permit approach.
- General permits prescribe one set of requirements for all applicable permittees. General permits are drafted by the NPDES permitting authority, then published for public comment before being finalized and issued.
- A Notice of Intent (NOI) serves as the application for the general permit. The permittee complies with the permit requirements by submitting to the NPDES permitting authority an NOI that describes the storm water management plan, including BMPs and measurable goals. A Phase II permittee has the flexibility to develop an individualized storm water program that addresses the particular characteristics and needs of its system, provided the basic requirements of the general permit are satisfied.
- The permittee then follows the Phase II permit application requirements.

##### **b. Individual Permits**

- Individual permits are required for Phase I “medium” and “large” MS4s, but are not recommended by EPA for Phase II program implementation.
- The permittee can either submit an individual application for coverage by the Phase II MS4 program (see 40 CFR §122.34) or the Phase I MS4 program (see 40 CFR §122.26(d)).
- For individual coverage under Phase II, the permittee must follow Phase II permit application requirements and provide an estimate of square mileage served by the system and any additional information requested by the NPDES permitting authority. A permittee electing to apply for coverage under the Phase I program must follow the permit application requirements detailed at 40 CFR §122.26(d).
- The NPDES permitting authority may allow more than one regulated entity to jointly apply for an individual permit.
- The NPDES permitting authority could incorporate either of the other two permitting options into the individual permit.

##### **c. Modification of a Phase I Individual Permit – A Co-Permittee Option**

- The operator of a regulated small MS4 could participate as a limited co-permittee in a neighboring Phase I (medium or large) MS4’s storm water management program by seeking a modification of the existing Phase I individual permit.  
*(A list of Phase I medium and large MS4s can be obtained from the EPA Office of Wastewater Management (OWM) or downloaded from the OWM website.)*

- The permittee must follow Phase I permit application requirements with some exclusions (see Section A-5c below).
- The permittee must comply with the applicable terms of the modified Phase I individual permit rather than the minimum control measures in the Phase II rule.

**Note:** Under a **general** or **individual** permit, operators of regulated small MS4 operators may share responsibilities with another regulated small MS4 operator. Operators selecting this option may jointly submit a Notice of Intent (NOI) or individual permit application identifying who will be responsible for implementing specific minimum measures within the area served by the MS4s.

## **A-5. Requirements of Each Permitting Option**

### **a. General Permits**

Operators of regulated small MS4s must submit the following information in their NOI or individual permit application:

- Best management practices (BMPs) for each of the six minimum control measures (see Table A-1 for full descriptions of each measure):
  1. Public education and outreach on storm water impacts.
  2. Public participation/involvement.
  3. Illicit discharge detection and elimination.
  4. Construction site storm water runoff control.
  5. Post-construction storm water management in new development or redevelopment.
  6. Pollution prevention/good housekeeping for municipal operations.
- Measurable goals for each minimum control measure (i.e., narrative or numeric standards used to gauge program effectiveness).
- Estimated months and years in which actions to implement each measure will be undertaken, including interim milestones and frequency.
- The person or persons responsible for implementing or coordinating the storm water program.

**Note:** With respect to minimum control measures, the operator of a regulated small MS4 has the flexibility to establish BMPs and measurable objectives that are most suitable for the system. The required storm water management program is developed from these selected BMPs and measurable objectives. The NPDES permitting authority can require modifications in the mix of selected BMPs and measurable objectives if all or parts are discovered to be inconsistent with provisions of the Phase II Final Rule. Similarly, the permittee can modify its combination of BMPs to make the program more effective.

### **b. Individual Permit Requirements**

The regulated small MS4 operator must adhere to the requirements of 40 CFR § 122.21(f) and Phase II permit application requirements.

### **c. Modification of a Phase I Individual Permit**

Under this permit option, the operator of a regulated small MS4 must follow Phase I permit application requirements in 40 CFR § 122.26(d), with some exclusions, rather than Phase II permit application requirements. The operator would not need to follow the application requirements of 40 CFR §§ 122.26(d)(1)(iii) and (iv) and (d)(2)(iii) – *discharge characterization*. The operator may satisfy the requirements in 40 CFR §§ 122.26(d)(1)(v) and (d)(2)(iv) – *identification of a management program* – by referring to the Phase I MS4 storm water management program.

**Table A-1: Information on the Six Minimum Control Measures**

<b>Minimum Control Measures</b>	
<b>1. Public Education and Outreach*</b>	Distributing educational materials and performing outreach to inform citizens about the impacts polluted storm water runoff discharges can have on water quality.
<b>2. Public Participation and Involvement*</b>	Providing opportunities for citizens to participate in program development and implementation, including effectively publicizing public hearings and having citizen representatives on a storm water management panel.
<b>3. Illicit Discharge Detection and Elimination</b>	Developing and implementing a plan to detect and eliminate illicit discharges to the storm sewer system (includes developing a system map and informing the community about hazards associated with illegal discharges and improper disposal of waste).
<b>4. Construction Site Runoff Control</b>	Developing, implementing, and enforcing an erosion and sediment control program for construction activities that disturb one or more acres of land (controls could include silt fences and temporary storm water detention ponds).
<b>5. Post-Construction Runoff Control</b>	Developing, implementing, and enforcing a program to address discharges of post-construction storm water runoff from new development and redevelopment areas. Applicable controls could include preventive actions such as protecting sensitive areas (e.g., wetlands) or the use of structural BMPs such as grassed swales or porous pavement.
<b>6. Pollution Prevention and Good Housekeeping</b>	Developing and implementing a program with the goal of preventing or reducing pollutant runoff from municipal operations. The program must include municipal staff training on pollution prevention measures and techniques (e.g., regular street sweeping, reduction in the use of pesticides or street salt, or frequent catch-basin cleaning).

**Note:** The BMPs for minimum control measures 3 through 6 are not enforceable until the NPDES permitting authority provides a list or “menu” of BMPs to assist permittees in the design and implementation of their storm water management programs. The NPDES permitting authority is required to provide this menu as an aid for operators that are unsure of the most appropriate and effective BMPs to use. Since the menu is intended to serve as guidance only, the operators can either select from the menu or identify other BMPs to meet the permit requirements. EPA is scheduled to develop a menu of BMPs by October 27, 2000.

\*The interpretation of “public” with respect to DoD facilities refers to “the resident and employee population within the fence line of the facility” as per 64 FR 68749 of 8 December 1999.

## **A-6. Minimum Small MS4 Permit Requirements**

### **a. Menu of Best Management Practices (BMPs)**

The operator of a regulated small MS4 must provide a menu of the most appropriate BMPs and measurable goals for each minimum control measure (Table A-1, page 19). The chosen BMPs and measurable goals, submitted in the permit application, become the required storm water management program; however, the NPDES permitting authority can require changes in the mix of chosen BMPs and measurable goals if all or some of them are found to be inconsistent with the provisions of the Phase II rule. Likewise, the permittee can change its mix of BMPs if it determines that the program is not as effective as it could be.

### **b. Applicable Standards**

- Reduce the discharge of pollutants to the “maximum extent practicable” (MEP).
- Protect water quality.
- Satisfy the appropriate water quality requirements of the Clean Water Act.

### **c. Frequency of Reports**

Reports must be submitted annually during the first permit term. For subsequent permit terms, reports must be submitted in years 2 and 4 only, unless the NPDES permitting authority requests more frequent reports.

### **d. Required Report Content**

The reports must include the following:

- The status of compliance with permit conditions, including an assessment of the appropriateness of the selected BMPs and progress toward achieving the selected measurable goals for each minimum measure.
- Results of any information collected and analyzed, including monitoring data, if any.
- A summary of the storm water activities planned for the next reporting cycle.
- A change in any identified BMPs or measurable goals for any minimum measure.
- Notice of relying on another governmental entity to satisfy some of the permit obligations (if applicable).

### **e. Monitoring**

Monitoring is not required under the Phase II rule, but the NPDES permitting authority has the discretion to require monitoring if deemed necessary. In the event monitoring is required by the permitting authority, requirements will be specified in the permit.

### **f. A Change in Selected BMPs**

If, upon evaluation of the program, improved controls are identified as necessary, permittees should revise their mix of BMPs to provide for a more effective program. Such a change, and an explanation of the change, must be noted in a report to the NPDES permitting authority.

### **g. Recordkeeping**

Records required by the NPDES permitting authority must be kept for at least 3 years and made accessible to the public at reasonable times during regular business hours. Records need not be submitted to the NPDES permitting authority unless the permittee is requested to do so.

**h. Implementation Schedule**

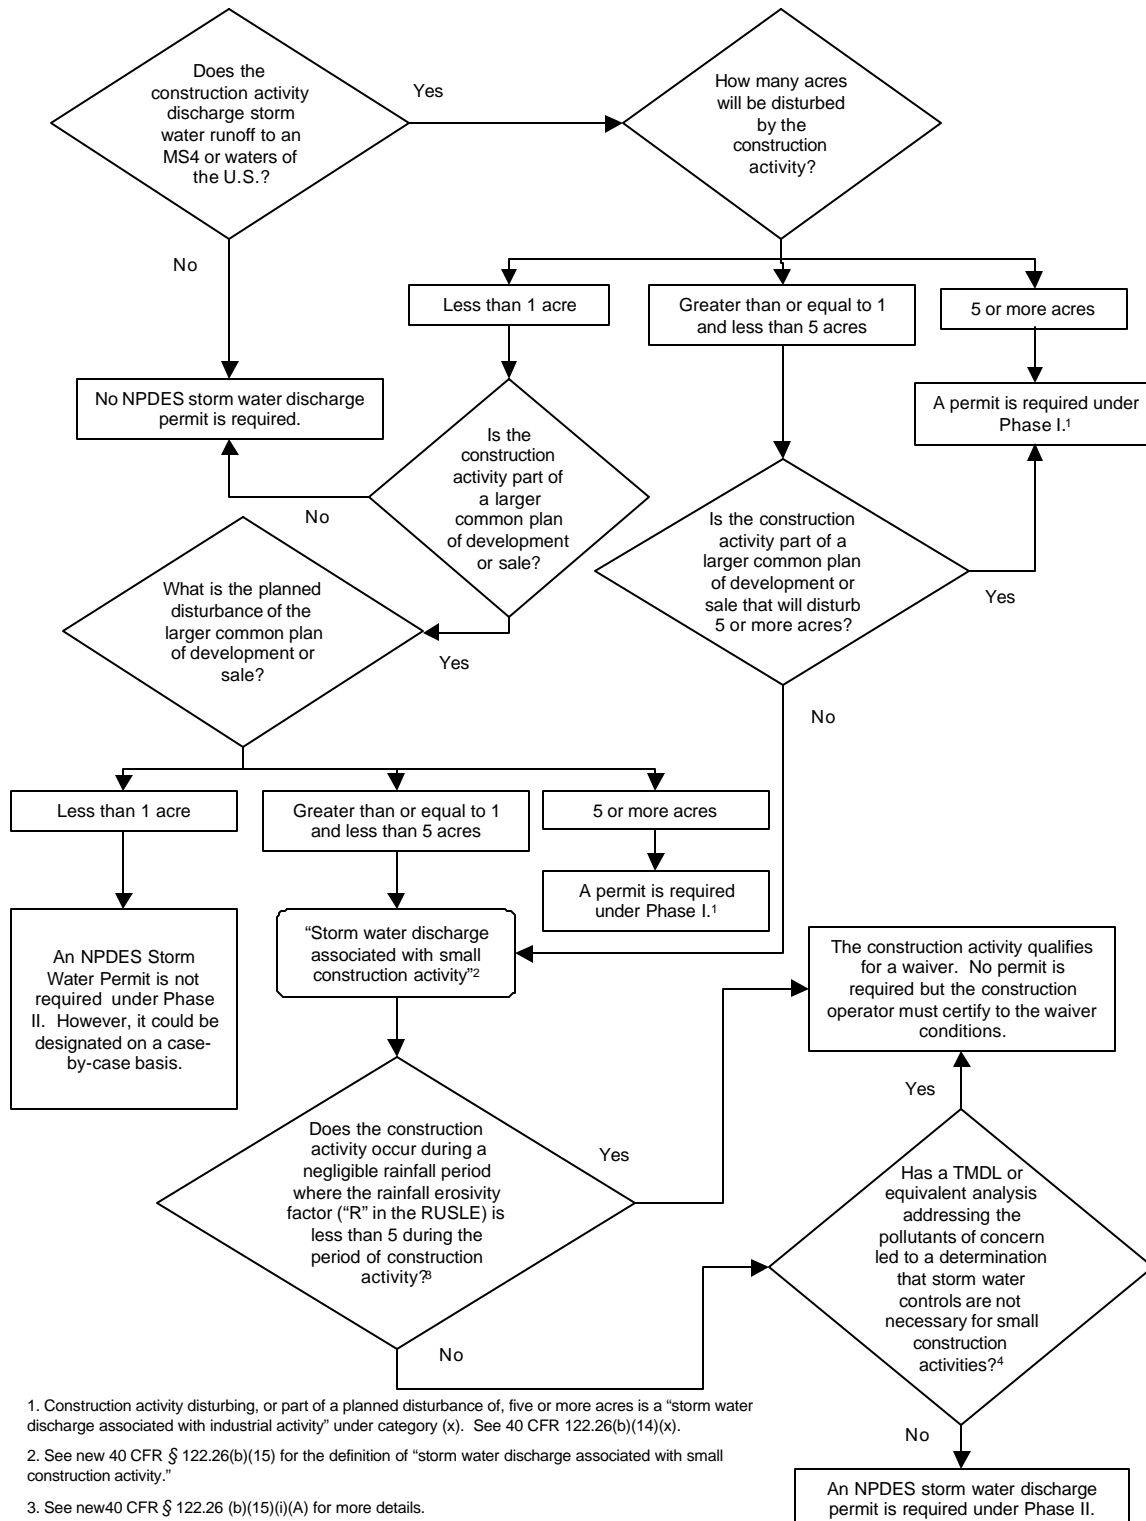

The Phase II rule allows you up to 5 years to fully implement your program. However, the exact timeframe is at the discretion of your NPDES permitting authority.

**i. Penalties for Noncompliance**

The NPDES permit that the operator of a regulated small MS4 is required to obtain is Federally enforceable; thus it subjects the permittee to potential enforcement actions and penalties by the NPDES permitting authority if the permittee does not fully comply with application or permit requirements. This Federal enforceability also includes the right for interested parties to sue under the citizen suit provision (refer to CWA Section 405).

## Appendix B: Compliance Requirements for Small Construction Activities

Figure B-1: Construction Activity Storm Water Program Permitting Decision Tree

## **B-1. Applicability**

The Storm Water Phase II Rule covers construction activities either through automatic nationwide designation or on a case-by-case designation made by the NPDES permitting authority.

### **Who is automatically designated for coverage?**

Operators of small construction activities that will disturb 1 or more but less than 5 acres of land must obtain a NPDES permit before discharging storm water to a municipal separate storm water system or waters of the U.S.

Construction activities are also designated if they disturb less than 1 acre but are part of a larger common plan of development or sale with a planned disturbance of equal to or greater than 1 acre and less than 5 acres.

**Note:** Under Phase II, storm water discharges from construction site activities that result in disturbance of greater than or equal to 1 acre and less than 5 acres of land are designated as “storm water discharges associated with small construction activity” (40 CFR § 122.26(b)(15)).

### **Who can be designated for coverage by the permitting authority?**

Operators of small construction activities that disturb less than 1 acre may be designated as regulated storm water dischargers on a case-by-case basis if the permitting authority determines that the discharger is **causing or has the potential to cause an adverse impact** on water quality.

## **B-2. Waivers**

Operators of small construction activities who can certify to either one of the following two conditions can be waived from meeting the requirements of the Storm Water Phase II rule:

- **Condition 1:** Low predicted rainfall potential, where the rainfall erosivity factor is less than 5 during the period of construction activity. To qualify for this waiver, the construction site operator must determine the value of the rainfall erosivity factor (R factor) in the Revised Universal Soil Loss Equation (RUSLE) and then certify to the permitting authority that the value is less than 5 during the period of construction. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, “Predicting Soil Erosion by Water: A Guide to Conservation Planning With the Revised Universal Soil Loss Equation (RUSLE).” The handbook is no longer in print but Chapter 2 can be accessed at EPA’s website or by contacting the EPA Water Resource Center. EPA’s website is <http://www.epa.gov/owm/sw/phase2>.
- **Condition 2:** A determination that storm water controls are not necessary based on either:
  - a. A total maximum daily load (TMDL) that addresses the pollutants of concern for construction activities. A TMDL is developed for each pollutant found to be contributing to the impairment of a waterbody or segment of a waterbody. To allow a waiver for construction activities, a TMDL would need to address sediment, or a parameter that addresses sediment such as total suspended

solids, turbidity, or siltation. Additional TMDLs addressing common pollutants from construction sites such as nitrogen, phosphorous, and oil and grease also may be necessary to ensure water quality protection and allow a waiver from the NPDES storm water program; OR

- b. An equivalent analysis that determines allocations are not needed to protect water quality based on consideration of in-stream concentrations, expected growth in pollutant concentrations from all sources, and a margin of safety.

### **B-3. Requirements**

Phase II rule requires operators of designated small construction sites, nationally, to obtain an NPDES permit and implement practices to minimize pollutant runoff. It is important to note that locally these same sites also may be covered by State, Tribal, or local construction runoff control programs.

In contrast to the requirements for regulated small MS4s, requirements for small construction activity (predominantly activity disturbing from 1 to less than or equal to 5 acres of land) are not specified in the Phase II regulation. The requirements are left to the discretion of the NPDES permitting authority when it develops the small construction activity permit. EPA anticipates that the permit for small construction activity will be similar to the existing storm water general permits for large construction activity regulated under Phase I. EPA's current construction general permit (CGP) contains the following requirements:

- Develop and implement a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP includes a description of the construction site, a description of best management practices (BMPs) for erosion and sediment control, post-construction storm water management, other controls, and self-evaluation and reporting.
- Submit a Notice of Intent (NOI).
- Submit a Notice of Termination (NOT) when permit coverage is no longer needed.

**Note:** Category (x) Construction Activity operated by a municipality of <100,000 or a small MS4 will be expected to follow the same requirements as those for a Phase I Category (x) Construction Activity.

### **B-4. Permitting Options**

EPA currently has only one type of permit available for construction activity operators, the NPDES Construction General Permit (CGP). EPA expects that the CGP for large construction activity will act as a model for small construction activity general permits. General permits stipulate one set of requirements for all applicable permittees. Permits are drafted by the NPDES permitting authority and published for public comment prior to being finalized and issued.

An NOI serves as the general permit application. The Phase II rule gives NPDES permitting authorities the discretion to not require submittal of an NOI under a general permit for small construction activity. If the option is available, small construction operators are required to submit an NOI and obtain coverage under a general permit by March 10, 2003, or earlier if required by the permitting authority.

If an NPDES permitting authority chooses to issue an individual construction permit for small construction activities, operators are required to follow individual application requirements located at 40 CFR §122.26(c)(1)(ii).

By March 10, 2003, an individual permit application must be submitted to the permitting authority for any storm water discharges associated with small construction activity identified in 40 CFR §122.26 (b)(15) that are not authorized by a general permit.

## **B-5. Elements of a Construction General Permit (CGP)**

### **a. Applicable Standards**

Unlike technology-based standards of best available technology (BAT) and best control technology (BCT) that are applicable to large construction activities, the goals that must be met by operators of small construction activities in their pollutant control plans include the following:

- Protect water quality (CWA Section 402(p)(6))
- Satisfy appropriate CWA water quality requirements

Large and small construction activities have different water quality standards because they were designated into the NPDES storm water program under two separate sections of the CWA, each with distinct standards. For practical purposes, the standard for small construction activities is substantively the same as the standard for large construction activities.

### **b. Storm Water Pollution Prevention Plan (SWPPP)**

The most important requirement of the Construction General Permit (CGP) is the storm water pollution prevention plan (SWPPP), which includes the appropriate BMPs to minimize the discharge of pollutants from the site. The CGP requires at least one SWPPP for each construction project or site.

The SWPPP comprises several elements:

- *Site description* – describes potential pollutant sources and other site characteristics.
- *Control plans (BMPs)* – must clearly describe not only the control measures to be used, but also the timing and responsible permittee for implementing the controls in the following categories:
  1. Erosion and Sediment
  2. Storm Water Management
  3. Other
- *Inspection plans* – include regular inspections of disturbed areas of the site that have not been stabilized, exposed materials storage areas, structural controls, and vehicle entrances and exits.
- *Maintenance plans* – cover the requirement that operators perform maintenance on the controls (BMPs) to ensure they are in effective operating condition.
- *Signatures* – ensure that the SWPPP has been approved by at least one of the persons responsible for submitting an NOI for the project.
- *Accessibility* – requires the operator(s) to retain a copy of the SWPPP at the construction site or other local location accessible to the permitting authority.

**Note:** Contact your EPA Regional office or State environmental agency for information on construction permits in your State. In addition, EPA published a construction SWPPP guidance in a document entitled *Storm Water Management for Construction Activities: Developing Storm Water Pollution Prevention Plans and Best Management Practices* (EPA 832-R-92-005, September 1992).

### c. Notice of Intent (NOI)

A complete and accurate NOI must be submitted to the NPDES permitting authority. An NOI includes general information and a certification that the activity will not impact endangered or threatened species.

**Note:** This certification is unique to EPA's NOI and is not a requirement of most NPDES-delegated State NOIs.

### d. Notice of Termination (NOT)

A completed NOT must be submitted to the NPDES permitting authority within 30 days after one or more of the following conditions have been met:

- Final stabilization has been achieved on all portions of the site for which the permittee is responsible;
- Another operator/permittee has assumed control over all areas of the site that have not been finally stabilized; or
- For residential construction only: temporary stabilization of a lot has been completed prior to transference of ownership to the homeowner, with the homeowner being made aware of the need to perform final stabilization.

**Note:** Integration of NPDES Program for Construction with NPDES Program for MS4s. Although frequently confused, the relationship between the NPDES Storm Water Program for construction activity and the construction runoff control program implemented by NPDES-regulated MS4s are two **separate** and **distinct** construction programs. In the event a site is located in a NPDES-regulated MS4's jurisdiction, a construction operator is subject to requirements under **both** the NPDES storm water program and the construction runoff control program.

## Appendix C: Compliance Requirements for Industrial Activities

### C-1. Applicability

The “no exposure” exclusion now applies to **all** industrial categories listed in the 1990 Phase I Storm Water Regulations, except for construction activities disturbing 5 or more acres (Category (x)). The “no exposure” exclusion seeks to provide a simplified method for complying with the Clean Water Act to all industrial facilities that are entirely indoors.

Phase II also **extended** the deadline to obtain permit coverage for industrial activities operated by municipalities with populations less than 100,000 that were temporarily exempted from permitting under the Intermodal Surface Transportation Enforcement Act (ISTEA) of 1991. The new deadline is March 10, 2003.

### C-2. Requirements

As revised, if a “no exposure” condition exists at a Phase I industrial facility, permits will not be required for storm water discharges from these facilities. All industrial facilities exhibiting no exposure of materials to storm water, including “light industrial” facilities, are required to submit a certification to the permitting authority. (See pages 28-31 for a copy of the “No Exposure” Certification form.) Facilities are required to certify that a condition of “no exposure” exists at its facility and must either maintain a condition of “no exposure” or obtain a permit in the event the facility is unable to maintain the “no exposure” condition. The exclusion from permitting is available on a facility-wide basis only, not for individual outfalls. The “no exposure” exclusion does not identify all situations, but NPDES permitting authorities can address the issue on a case-by-case basis.

**Note:** The “no exposure” exclusion is unavailable to Category (x) – large construction activities.

<b>NPDES FORM 3510-11</b>		United States Environmental Protection Agency Washington, DC 20460  <b>NO EXPOSURE CERTIFICATION for Exclusion from NPDES Storm Water Permitting</b>	Form Approved OMB No. 2040-0211
<p>Submission of this No Exposure Certification constitutes notice that the entity identified in Section A does not require permit authorization for its storm water discharges associated with industrial activity in the State identified in Section B under EPA's Storm Water Multi-Sector General Permit due to the existence of a condition of no exposure.</p> <p>A condition of no exposure exists at an industrial facility when all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product or waste product. A storm resistant shelter is not required for the following industrial materials and activities:</p> <ul style="list-style-type: none"> <li>- drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak. "Sealed" means banded or otherwise secured and without operational taps or valves;</li> <li>- adequately maintained vehicles used in material handling; and</li> <li>- final products, other than products that would be mobilized in storm water discharges (e.g., rock salt).</li> </ul> <p>A No Exposure Certification must be provided for each facility qualifying for the no exposure exclusion. In addition, the exclusion from NPDES permitting is available on a facility-wide basis only, not for individual outfalls. If any industrial activities or materials are or will be exposed to precipitation, the facility is not eligible for the no exposure exclusion.</p> <p>By signing and submitting this No Exposure Certification form, the entity in Section A is certifying that a condition of no exposure exists at its facility or site, and is obligated to comply with the terms and conditions of 40 CFR 122.26(g).</p> <p><b>ALL INFORMATION MUST BE PROVIDED ON THIS FORM.</b></p> <p><b>Detailed instructions for completing this form and obtaining the no exposure exclusion are provided on pages 3 and 4.</b></p>			
<b>A. Facility Operator Information</b> 1. Name: _____ 2. Phone: _____ 3. Mailing Address: a. Street: _____ b. City: _____ c. State: _____ d. Zip Code: _____			
<b>B. Facility/Site Location Information</b> 1. Facility Name: _____ 2. a. Street Address: _____ b. City: _____ c. County: _____ d. State: _____ e. Zip Code: _____ 3. Is the facility located on Indian Lands? Yes <input type="checkbox"/> No <input type="checkbox"/> 4. Is this a Federal facility? Yes <input type="checkbox"/> No <input type="checkbox"/> 5. a. Latitude: _____° _____' _____" b. Longitude: _____° _____' _____" 6. a. Was the facility or site previously covered under an NPDES storm water permit? Yes <input type="checkbox"/> No <input type="checkbox"/> b. If yes, enter NPDES permit number: _____ 7. SIC/Activity Codes: Primary: _____ Secondary (if applicable): _____ 8. Total size of site associated with industrial activity: _____ acres 9. a. Have you paved or roofed over a formerly exposed, pervious area in order to qualify for the no exposure exclusion? Yes <input type="checkbox"/> No <input type="checkbox"/> b. If yes, please indicate approximately how much area was paved or roofed over. Completing this question does not disqualify you for the no exposure exclusion. However, your permitting authority may use this information in considering whether storm water discharges from your site are likely to have an adverse impact on water quality, in which case you could be required to obtain permit coverage. <div style="display: flex; justify-content: space-around; margin-top: 5px;"> <span>Less than one acre <input type="checkbox"/></span> <span>One to five acres <input type="checkbox"/></span> <span>More than five acres <input type="checkbox"/></span> </div>			

<b>NPDES FORM 3510-11</b>		<b>NO EXPOSURE CERTIFICATION for Exclusion from NPDES Storm Water Permitting</b>	Form Approved OMB No. 2040-0211
-----------------------------------	--	--	------------------------------------

**C. Exposure Checklist**

Are any of the following materials or activities exposed to precipitation, now or in the foreseeable future?  
(Please check either "Yes" or "No" in the appropriate box.) **If you answer "Yes" to any of these questions (1) through (11), you are not eligible for the no exposure exclusion.**

	Yes	No
1. Using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to storm water	<input type="checkbox"/>	<input type="checkbox"/>
2. Materials or residuals on the ground or in storm water inlets from spills/leaks	<input type="checkbox"/>	<input type="checkbox"/>
3. Materials or products from past industrial activity	<input type="checkbox"/>	<input type="checkbox"/>
4. Material handling equipment (except adequately maintained vehicles)	<input type="checkbox"/>	<input type="checkbox"/>
5. Materials or products during loading/unloading or transporting activities	<input type="checkbox"/>	<input type="checkbox"/>
6. Materials or products stored outdoors (except final products intended for outside use [e.g., new cars] where exposure to storm water does not result in the discharge of pollutants)	<input type="checkbox"/>	<input type="checkbox"/>
7. Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers	<input type="checkbox"/>	<input type="checkbox"/>
8. Materials or products handled/stored on roads or railways owned or maintained by the discharger	<input type="checkbox"/>	<input type="checkbox"/>
9. Waste material (except waste in covered, non-leaking containers [e.g., dumpsters])	<input type="checkbox"/>	<input type="checkbox"/>
10. Application or disposal of process wastewater (unless otherwise permitted)	<input type="checkbox"/>	<input type="checkbox"/>
11. Particulate matter or visible deposits of residuals from roof stacks and/or vents not otherwise regulated (i.e., under an air quality control permit) and evident in the storm water outflow	<input type="checkbox"/>	<input type="checkbox"/>

**D. Certification Statement**

I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of "no exposure" and obtaining an exclusion from NPDES storm water permitting.

I certify under penalty of law that there are no discharges of storm water contaminated by exposure to industrial activities or materials from the industrial facility or site identified in this document (except as allowed under 40 CFR 122.26(g)(2)).

I understand that I am obligated to submit a no exposure certification form once every five years to the NPDES permitting authority and, if requested, to the operator of the local municipal separate storm sewer system (MS4) into which the facility discharges (where applicable). I understand that I must allow the NPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under an NPDES permit prior to any point source discharge of storm water from the facility.

Additionally, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

<b>NPDES FORM 3510-11</b>		<b>Instructions for the NO EXPOSURE CERTIFICATION for Exclusion from NPDES Storm Water Permitting</b>	Form Approved OMB No. 2040-0211
<b>Who May File a No Exposure Certification</b>  Federal law at 40 CFR Part 122.26 prohibits point source discharges of storm water associated with industrial activity to waters of the U.S. without a National Pollutant Discharge Elimination System (NPDES) permit. However, NPDES permit coverage is not required for discharges of storm water associated with industrial activities identified at 40 CFR 122.26(b)(14)(i)-(ix) and (xi) if the discharger can certify that a condition of "no exposure" exists at the industrial facility or site.  Storm water discharges from construction activities identified in 40 CFR 122.26(b)(14)(x) and (b)(15) are not eligible for the no exposure exclusion.  <b>Obtaining and Maintaining the No Exposure Exclusion</b>  This form is used to certify that a condition of no exposure exists at the industrial facility or site described herein. This certification is only applicable in jurisdictions where EPA is the NPDES permitting authority and must be re-submitted at least once every five years.  The industrial facility operator must maintain a condition of no exposure at its facility or site in order for the no exposure exclusion to remain applicable. If conditions change resulting in the exposure of materials and activities to storm water, the facility operator must obtain coverage under an NPDES storm water permit immediately.  <b>Where to File the No Exposure Certification Form</b>  Mail the completed no exposure certification form to:  Storm Water No Exposure Certification (4203) USEPA 401 M Street, SW Washington, D.C. 20460  <b>Completing the Form</b>  You <u>must</u> type or print, using uppercase letters, in appropriate areas only. Enter only one character per space (i.e., between the marks). Abbreviate if necessary to stay within the number of characters allowed for each item. Use one space for breaks between words. One form must be completed for each facility or site for which you are seeking to certify a condition of no exposure. Additional guidance on completing this form can be accessed through EPA's web site at <a href="http://www.epa.gov/owm/sw">www.epa.gov/owm/sw</a> . Please make sure you have addressed all applicable questions and have made a photocopy for your records before sending the completed form to the above address.		<b>Section B. Facility/Site Location Information</b>  <ol style="list-style-type: none"> <li>1. Enter the official or legal name of the facility or site.</li> <li>2. Enter the complete street address (if no street address exists, provide a geographic description [e.g., Intersection of Routes 9 and 55]), city, county, state, and zip code. Do not use a P.O. Box number.</li> <li>3. Indicate whether the facility is located on Indian Lands.</li> <li>4. Indicate whether the industrial facility is operated by a department or agency of the Federal Government (see also Section 313 of the Clean Water Act).</li> <li>5. Enter the latitude and longitude of the approximate center of the facility or site in degrees/minutes/seconds. Latitude and longitude can be obtained from United States Geological Survey (USGS) quadrangle or topographic maps, by calling 1-(888) ASK-USGS, or by accessing EPA's web site at <a href="http://www.epa.gov/owm/sw/industry/index.htm">http://www.epa.gov/owm/sw/industry/index.htm</a> and selecting Latitude and Longitude Finders under the Resources/Permit section.           Latitude and longitude for a facility in decimal form must be converted to degrees (°), minutes ('), and seconds (") for proper entry on the certification form. To convert decimal latitude or longitude to degrees/minutes/seconds, follow the steps in the following example.   <b>Example:</b> Convert decimal latitude 45.1234567 to degrees (°), minutes ('), and seconds (").           a) The numbers to the left of the decimal point are the degrees: 45°.           b) To obtain minutes, multiply the first four numbers to the right of the decimal point by 0.006: 1234 x 0.006 = 7.404.           c) The numbers to the left of the decimal point in the result obtained in (b) are the minutes: 7'.           d) To obtain seconds, multiply the remaining three numbers to the right of the decimal from the result obtained in (b) by 0.06: 404 x 0.06 = 24.24. Since the numbers to the right of the decimal point are not used, the result is 24".           e) The conversion for 45.1234567 = 45° 7' 24".       </li> </ol> <ol style="list-style-type: none"> <li>6. Indicate whether the facility was previously covered under an NPDES storm water permit. If so, include the permit number.</li> <li>7. Enter the 4-digit SIC code which identifies the facility's primary activity, and second 4-digit SIC code identifying the facility's secondary activity, if applicable. SIC codes can be obtained from the <u>Standard Industrial Classification Manual, 1987</u>.</li> <li>8. Enter the total size of the site associated with industrial activity in acres. Acreage may be determined by dividing square footage by 43,560, as demonstrated in the following example.   <b>Example:</b> Convert 54,450 ft<sup>2</sup> to acres           Divide 54,450 ft<sup>2</sup> by 43,560 square feet per acre:          54,450 ft<sup>2</sup> ÷ 43,560 ft<sup>2</sup>/acre = 1.25 acres.       </li> <li>9. Check "Yes" or "No" as appropriate to indicate whether you have paved or roofed over a formerly exposed, pervious area (i.e., lawn, meadow, dirt or gravel road/parking lot) in order to qualify for no exposure. If yes, also indicate approximately how much area was paved or roofed over and is now impervious area.</li> </ol>	
<b>Section A. Facility Operator Information</b>  <ol style="list-style-type: none"> <li>1. Provide the legal name of the person, firm, public organization, or any other entity that operates the facility or site described in this certification. The name of the operator may or may not be the same as the name of the facility. The operator is the legal entity that controls the facility's operation, rather than the plant or site manager.</li> <li>2. Provide the telephone number of the facility operator.</li> <li>3. Provide the mailing address of the operator (P.O. Box numbers may be used). Include the city, state, and zip code. All correspondence will be sent to this address.</li> </ol>			

<b>NPDES FORM 3510-11</b>		<b>Instructions for the NO EXPOSURE CERTIFICATION for Exclusion from NPDES Storm Water Permitting</b>	Form Approved OMB No. 2040-0211
<div style="display: flex; justify-content: space-between;"> <div style="width: 48%;"> <p><b>Section C. Exposure Checklist</b></p> <p>Check "Yes" or "No" as appropriate to describe the exposure conditions at your facility. If you answer "Yes" to <b>ANY</b> of the questions (1) through (11) in this section, a potential for exposure exists at your site and you cannot certify to a condition of no exposure. You must obtain (or already have) coverage under an NPDES storm water permit. After obtaining permit coverage, you can institute modifications to eliminate the potential for a discharge of storm water exposed to industrial activity, and then certify to a condition of no exposure.</p> <p><b>Section D. Certification Statement</b></p> <p>Federal statutes provide for severe penalties for submitting false information on this application form. Federal regulations require this application to be signed as follows:</p> <p>For a corporation: by a responsible corporate officer, which means:</p> <ul style="list-style-type: none"> <li>(i) president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions for the corporation, or</li> <li>(ii) the manager of one or more manufacturing, production, or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where</li> </ul> </div> <div style="width: 48%;"> <p>authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures:</p> <p>For a partnership or sole proprietorship: by a general partner or the proprietor; or</p> <p>For a municipal, State, Federal, or other public facility: by either a principal executive or ranking elected official.</p> <p><b>Paperwork Reduction Act Notice</b></p> <p>Public reporting burden for this certification is estimated to average 1.0 hour per certification, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose to provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding the burden estimate, any other aspect of the collection of information, or suggestions for improving this form, including any suggestions which may increase or reduce this burden to: Director, OPPE Regulatory Information Division (2137), USEPA, 401 M Street, SW, Washington, D.C. 20460. Include the OMB control number of this form on any correspondence. Do not send the completed No Exposure Certification form to this address.</p> </div> </div>			

## Appendix D: Abbreviations & Definitions

### ABBREVIATIONS

BAT	Best Available Technology Economically Achievable (applies to non-conventional and toxic pollutants)
BCT	Best Conventional Pollutant Control Technology (applies to conventional pollutants)
BMP	Best Management Practice
BPJ	Best Professional Judgment
BPT	Best Practicable Control Technology Currently Available (generally applies to conventional pollutants and some metals)
CFR	Code of Federal Regulations
CGP	Construction General Permit
COD	Chemical Oxygen Demand
CSO	Combined Sewer Overflow
CWA	Clean Water Act (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972)
CZARA	Coastal Zone Act Reauthorization Amendments
DO	Dissolved Oxygen
DMR	Discharge Monitoring Report
ELG	Effluent Limitations Guidelines
EPA	Environmental Protection Agency
FR	Federal Register
MEP	Maximum Extent Practicable
MS4	Municipal Separate Storm Sewer System
MSGP	Multi Sector General Permit
NOI	Notice of Intent
NOT	Notice of Termination
NOV	Notice of Violation
NPDES	National Pollutant Discharge Elimination System
NPS	Non-point Source
O&M	Operation and Maintenance
OW	Office of Water
OWM	Office of Wastewater Management
PA	Permitting Authority
POTW	Publicly Owned Treatment Works
RUSLE	Revised Universal Soil Loss Equation
SIC	Standard Industrial Classification
SWPPP	Storm Water Pollution Prevention Plan
TMDL	Total Maximum Daily Load
TSS	Total Suspended Solids
UA	Urbanized Area

## DEFINITIONS

**Best Available Treatment (BAT)/Best Control Technology (BCT):** A level of technology based on the very best (state of the art) control and treatment measures that have been developed or are capable of being developed and that are economically achievable within the appropriate industrial category.

**Best Management Practices (BMPs):** Activities or structural improvements that help reduce the quantity and improve the quality of storm water runoff. BMPs include treatment requirements, operating procedures, and practices to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

**Category (xi) facilities:** Specific facilities classified as light industry with equipment or materials exposed to storm water.

**Clean Water Act (Water Quality Act):** (formerly the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972). Public law 92-500; 33 U.S.C. 1251 et seq.; legislation which provides statutory authority for the NPDES program.

**Conveyance:** The process of water moving from one place to another.

**Construction Activity:** Activity that involves land disturbance of equal to or greater than 1 and less than 5 acres.

**Discharge:** The volume of water (and suspended sediment if surface water) that passes a given location within a given period of time.

**Erosion:** When land is diminished or worn away due to wind, water, or glacial ice. Often the eroded debris (silt or sediment) becomes a pollutant via storm water runoff. Erosion occurs naturally but can be intensified by land clearing activities such as farming, development, road building, and timber harvesting.

**Excavation:** The process of removing earth, stone, or other materials from land.

**General Permit:** A permit issued under the NPDES program to cover a certain class or category of storm water discharges. These permits reduce the administrative burden of permitting storm water discharges.

**Grading:** The cutting and/or filling of the land surface to a desired slope or elevation.

**Illicit Connection:** Any discharge to a municipal separate storm sewer that is not composed entirely of storm water and is not authorized by an NPDES permit, with some exceptions (e.g., discharges due to fire fighting activities).

**Industrial Activity:** Any activity that is directly related to manufacturing, processing or raw materials storage at an industrial plant.

**Large Municipal Separate Storm Sewer System (MS4):** An MS4 located in an incorporated place or county with a population of 250,000 or more, as determined by the latest U.S. Census.

**Light Manufacturing Facilities:** Described under Category (xi) of the definition of "storm water discharges associated with industrial activity" [40 CFR 122.26(b)(14)(xi)]. Under the Phase I NPDES Storm Water Program, these facilities were eligible for exemption from storm water permitting requirements if certain areas and activities were not exposed to storm water. As a result of the Phase II Final Rule, these facilities must now certify to a condition of no exposure.

**Maximum Extent Practicable (MEP):** A standard for water quality that applies to all MS4 operators regulated under the NPDES Storm Water Program. Since no precise definition of MEP exists, it allows for maximum flexibility on the part of MS4 operators as they develop and implement their programs.

**Medium Municipal Separate Storm Sewer System (MS4):** MS4 located in an incorporated place or county with a population of 100,000 or more but less than 250,000, as determined by the latest U.S. Census.

**Municipal Separate Storm Sewer System (MS4):** A publically-owned conveyance or system of conveyances that discharges to waters of the U.S. and is designed or used for collecting or conveying storm water, is not a combined sewer, and is not part of a publicly-owned treatment works (POTW).

**Multi-Sector General Permit (MSGP):** An NPDES permit that regulates storm water discharges from eleven categories of industrial activities.

**MS4:** What constitutes a *municipal separate storm sewer system* (MS4) is often misinterpreted and misunderstood. The term MS4 does not solely refer to municipally-owned storm sewer systems, but rather is a term of art with a much broader application that can include, in addition to local jurisdictions, State transportation departments, universities, local sewer districts, hospitals, military bases, and prisons. An MS4 also is not always just a system of underground pipes – it can include roads with drainage systems, gutters, and ditches. The regulatory definition of an MS4 follows.

According to 40 CFR 122.26(b), "municipal separate storm sewer means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

- (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law)...including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the Clean Water Act that discharges into waters of the United States.
- (ii) Designed or used for collecting or conveying storm water;
- (iii) Which is not a combined sewer; and
- (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2."

**No exposure:** All industrial materials or activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product or waste product.

**Non-authorized States:** any State that does not have the authority to regulate the NPDES Storm Water Program.

**Non-point Source (NPS) Pollutants:** Pollutants from many diffuse sources. NPS pollution is caused by rainfall or snowmelt moving over and through the ground. As the runoff moves, it picks up and carries away natural and human-made pollutants, finally depositing them into lakes, rivers, wetlands, coastal waters, and even our underground sources of drinking water.

**Notice of Intent (NOI):** An application to notify the permitting authority of a facility's intention to be covered by a general permit; exempts a facility from having to submit an individual or group application.

**NPDES:** "National Pollutant Discharge Elimination System" the name of the surface water quality program authorized by Congress as part of the 1987 Clean Water Act. This is EPA's program to control the discharge of pollutants to waters of the United States (see 40 CFR 122.2).

**O&M Expenditures:** The operating and maintenance costs associated with the continual workings of a project.

**Outfall:** The point where wastewater or drainage discharges from a sewer pipe, ditch, or other conveyance to a receiving body of water.

**Permitting Authority (PA):** The NPDES-authorized State agency or EPA regional office that administers the NPDES Storm Water Program. PAs issue permits, provide compliance assistance, and inspect and enforce the program.

**Physically interconnected MS4:** This means that one MS4 is connected to a second MS4 in such a way that it allows for direct discharges into the second system.

**Point Source Discharge :** As defined in 40 CFR 122.22, "any discernible confined and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collecting system, or vessel or other floating craft from which pollutants are or may be discharged. The term does not include return flows from irrigated agriculture or agricultural storm water runoff."

**Point Source Pollutant:** Pollutants from a single, identifiable source such as a factory or refinery.

**Pollutant Loading:** The total quantity of pollutants in storm water runoff.

**Qualifying local program:** A local, State or Tribal municipal storm water management program that imposes, at a minimum, the relevant requirements of one or more of the minimum control measures includes in 40 CFR § 122.34(b).

**Regulated MS4:** Any MS4 covered by the NPDES Storm Water Program (regulated small, medium, or large MS4s).

**Retrofit:** The modification of storm water management systems through the construction and/or enhancement of wet ponds, wetland plantings, or other BMPs designed to improve water quality.

**Runoff:** Drainage or flood discharge that leaves an area as surface flow or as pipeline flow. Has reached a channel or pipeline by either surface or sub-surface routes.

**Sanitary Sewer:** A system of underground pipes that carries sanitary waste or process wastewater to a treatment plant.

**Sediment:** Soil, sand, and minerals washed from land into water, usually after rain. Sediment can destroy fish-nesting areas, clog animal habitats, and cloud waters so that sunlight does not reach aquatic plants.

**Sheet flow:** The portion of precipitation that moves initially as overland flow in very shallow depths before eventually reaching a stream channel.

**Site Plan:** A graphical representation of a layout of buildings and facilities on a parcel of land.

**Site Runoff:** Any drainage or flood discharge that is released from a specified area.

**Small Municipal Separate Storm Sewer System (MS4):** Any MS4 that is not regulated under Phase I of the NPDES Storm Water Program and Federally-owned MS4s. The definition of a small MS4 is not dependent on a population threshold and includes Federally owned systems, such as military bases and veterans hospitals.

**Stakeholder:** An entity that holds a special interest in an issue or program -- such as the storm water program -- since it is or may be affected by it.

**Standard Industrial Classification (SIC) Code:** A four-digit number that is used to identify various types of industries.

**Storm Drain:** A slotted opening leading to an underground pipe or an open ditch for carrying surface runoff.

**Storm Water:** Precipitation that accumulates in natural and/or constructed storage and storm water systems during and immediately following a storm event. For example: storm water runoff, surface water runoff, street wash waters related to street cleaning or maintenance, infiltration (other than infiltration contaminated by seepage from sanitary sewers or by other discharges) and drainage related to storm events or snow melt.

**Storm Water Management:** Functions associated with planning, designing, constructing, maintaining, financing, and regulating the facilities (both constructed and natural) that collect, store, control, and/or convey storm water.

**Storm Water Pollution Prevention Plan (SWPPP):** A plan to describe a process whereby a facility thoroughly evaluates potential pollutant sources at a site and selects and implements appropriate measures designed to prevent or control the discharge of pollutants in storm water runoff.

**Surface Water:** Water that remains on the surface of the ground, including rivers, lakes, reservoirs, streams, wetlands, impoundments, seas, estuaries, etc.

**Total Maximum Daily Load (TMDL):** The maximum amount of pollutants that can be released into a water body without adversely affecting the water quality.

**Tool Box:** A term to describe the activities and materials that EPA plans to perform/produce to facilitate implementation of the storm water program in an effective and cost-efficient manner. The eight components include: 1) fact sheets; 2) guidance documents; 3) menu of BMPs; 4) compliance assistance; 5) information clearing house; 6) training and outreach efforts; 7) technical research; and 8) support for demonstration projects.

**Urbanized Area (UA):** A Bureau of the Census determination of a central place (or places) and the adjacent densely settled surrounding territory that together have a minimum residential population of 50,000 people and a minimum average density of 1,000 people/square mile. This is a simplified definition of a UA, the full definition is very complex.

**Urban Runoff:** Storm water from urban areas, which tends to contain heavy concentrations of pollutants from urban activities.

**Watershed:** That geographical area which drains to a specified point on a water course, usually a confluence of streams or rivers (also known as drainage area, catchment, or river basin).

**Waters of the U.S.:** includes interstate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce. (Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA are not waters of the United States.) A complete definition can be found at 40 CFR 122.2.

**Wet Weather Flows:** Water entering storm drains during rainstorms/wet weather events.

## Appendix E: List of Incorporated and Unincorporated Places

### Incorporated Places With Populations Greater Than 250,000 According to the 1990 Decennial Census by the Bureau of the Census

AL Birmingham	IL Chicago	NY Bronx Borough	PA Pittsburgh
AZ Phoenix	IN Indianapolis	NY Brooklyn Borough	TN Memphis
AZ Tucson	KS Wichita	NY Manhattan	TN Nashville/Davidson
CA Long Beach	KY Louisville	Borough	TX Austin
CA Los Angeles	LA New Orleans	NY Queens Borough	TX Dallas
CA Oakland	MD Baltimore	NY Staten Island	TX El Paso
CA Sacramento	MA Boston	Borough	TX Fort Worth
CA San Diego	MI Detroit	NC Charlotte	TX Houston
CA San Francisco	MN Minneapolis	OH Cincinnati	TX San Antonio
CA San Jose	MN St Paul	OH Cleveland	VA Norfolk
